

Black Water Discharge Valve Control

Open and close your black water discharge valve safely from the helm station or anywhere on board.

THE SOLUTION

Simple, safe control of the black water discharge valve.

On many yachts, the black water discharge valve is manually operated and located in a difficult-to-access technical space below deck. With an electric discharge valve integrated into Smarter.Yachts, the valve can be opened or closed from the helm station or anywhere on board.

Key benefits

- Operate the discharge valve remotely
- No need to access a hard-to-reach manual valve
- Clear open/closed status feedback
- Supports safe and controlled discharge procedures
- Available in 316-grade stainless steel
- Available for 12 V and 24 V systems (24 V recommended)

MATERIAL

316-grade stainless steel

POWER

12 V or 24 V - 24 V recommended

FEEDBACK

Open, closed and moving

YOUR YACHT. YOUR CONFIGURATION.
