

Code 0 Furler Control

Operate your electric Code 0 furler from the position that provides the best visibility and control.

THE SOLUTION

Flexible sail handling from the position that gives you the best control.

Electric furling systems simplify sail handling, but their controls are often limited to fixed switches or dedicated remote controls. With Smarter.Yachts, the furler can be operated from a familiar mobile interface, allowing the operator to choose a position with a clear view of the sail and deck.

Key benefits

- Operate the furler from your mobile device
- Choose the best position on deck for visibility and control
- Works alongside existing local or OEM controls
- Simple retrofit integration with electric furling systems

KEY POINT 1

Operate the furler from your mobile device

KEY POINT 2

Choose the best position on deck for visibility and control

KEY POINT 3

Works alongside existing local or OEM controls

YOUR YACHT. YOUR CONFIGURATION.

Discuss your installation with us.
