

SMART YACHT SOLUTIONS - USE CASE

Navigation System Control

Switch or restart your navigation systems directly from the helm station.

THE SOLUTION

Full control of navigation systems - exactly where you need it.

On many yachts, navigation electronics are powered via a single switch located in the saloon rather than at the helm station. This setup makes it inconvenient to switch systems on or off, especially during active navigation when the helm should not be left unattended.

Key benefits

- Switch navigation systems directly from the helm
- No need to access saloon switches
- Immediate restart of instruments when required
- Works alongside existing manual switches

KEY POINT 1

Switch navigation systems directly from the helm

KEY POINT 2

No need to access saloon switches

KEY POINT 3

Immediate restart of instruments when required

YOUR YACHT. YOUR CONFIGURATION.

Discuss your installation with us.
