

Windlass Control

Operate your anchor windlass from the position that provides the best visibility and control.

THE SOLUTION

Flexible and safe anchor handling - without fixed control points.

Traditional windlass systems are typically controlled via fixed wired switches, limiting operation to specific positions on deck. This makes anchoring procedures less flexible, especially when visibility or communication between crew members is limited.

Key benefits

- Operate windlass wirelessly from anywhere onboard
- Full control during anchoring maneuvers
- Switch deck lights from the same interface
- Compatible with Lewmar and Quick windlass systems

KEY POINT 1

Operate windlass wirelessly from anywhere onboard

KEY POINT 2

Full control during anchoring maneuvers

KEY POINT 3

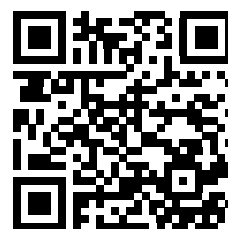

Switch deck lights from the same interface

YOUR YACHT. YOUR CONFIGURATION.
